html... I wanted to try Ubuntu as my next Linux Distribution (having used several Linux, mostly Debian based) but the problems I had were not wanting to solve (with some help) and I had to go back to my Windows partition :(I tried different Desktop Environments but none of them would work right And after installing Ubuntu I was afraid I would not be able to open my Windows partitions ... You can open up Windows partitions and access the data directly But, there's no Ubuntu installation CD or USB. I believe there is an ISO and USB But, I am not sure how to get Ubuntu to install. rich_ Are you on Windows at the moment? Yes. rich_ Do you have an Ubuntu live USB? rich_ Not a CD? I do not have any USB or CD. rich_ So what OS do you have installed right now? Windows 8.1. rich_ Do you have your Windows recovery key on hand? I have my old Windows 7 recovery CD. rich_ OK, does that work? I am going to try that. Can you log into the computer and use the recovery console? Recovery console?? Yes, that's what it is called What does that mean? In order to access that, hold shift while booting and press f8. rich_ It's a program that has a bunch of commands. rich_ It will give you a chance to check disk space, etc ok. Where do I find it? There's a few ways to get to it If you have some free time, I suggest installing GParted That will give 82157476af
